CAREER OBJECTIVE

Seeking a career where I can thrive in a positive atmosphere, collaborating with diverse teams to drive impactful projects forward while continuously evolving and developing my own abilities.

EDUCATION

National Institute Of Technology, Tiruchirapalli

July 2019 - May 2023

Bachelor of Technology

CGPA: 7.83/10

WORK EXPERIENCE

Software Development Engineer 1, Piramal Finance

July 2023 - present

- Designed, developed, and maintained **RESTful APIs** using Spring Boot, enabling seamless communication between microservices and achieving **90%** unit test coverage with **JUnit** and **Mockito**.
- Optimized **MongoDB connections** by **reducing CPU overhead and memory usage**, enabling a successful downgrade from **M60 to M50 cluster**, resulting in significant cost savings.
- **Migrated API Gateway layer** from **Apigee to NGINX**, handling both external and internal API calls for 3P/2P integrations and vendor systems, leading to improved scalability and reduced operational overhead.
- Engineered the personal loan 'Case Actions' workflow using **Spring State Machine**, designing rule-based stage transitions to automate loan processing and reduce manual oversight by **40-60%**
- Developed **ReviewQ**, a solution that reduced loan rejection rates by **25%** through intuitive UI and backend systems, enabling efficient KYC checks for loan approvals
- Spearheaded backend development for a scalable Loan Against Securities (**LAS**) product, partnering with cross-functional teams which resulted in launch of new product worth of **30-50Cr/month** in incremental income.
- Contributed to implementing a "**Backend Driven Frontend Framework**", simplifying frontend code management with **MongoDB for centralized configuration**, improving scalability and maintainability.
- Implemented a **fault-tolerant Kafka** message handling system by storing failed messages in MongoDB and designing a **ShedLock**-based retry mechanism to reprocess them at scheduled intervals.

PROJECTS

Blog application: (Spring Boot, MySQL); Self Project

Aug 2023

- * Built backend infrastructure for a blog platform with RESTful APIs in Spring Boot, enabling CRUD operations for posts, categories, and comments.
- * Designed and normalized a MySQL database schema with Spring Data JPA, utilizing indexing and relationships for efficient data management.
- * Implemented secure role-based authentication and authorization with the help of Spring Security and JWT.

Sorting Visualizer: (HTML, JavaScript); Self Project

Jan 2023

- * This is a web application built with HTML, CSS, and JavaScript that allows users to visualize various sorting algorithms in action
- * This web page allows the users to select the Sort algorithm (Bubble Sort, Insertion Sort, Selection Sort, Merge Sort, Quick Sort), select the array size, and speed of the visualization.

SKILLS & EXPERTISE

Programming Languages: C, C++, Java, HTML, JavaScript, SQL

Technical skills: Data Structure & Algorithms, OOPs(Object Oriented Programming) Concepts, LLD(low level design)

Tools & Frameworks: Springboot , Intelij, VS Code, GitHub, GitLab, jira, kafka

Databases: MySQL, MongoDB, Postgress DB
